刃口热轧/CUTTING EDGE HOT ROLLING

所有圆盘耙片都是热轧片。热轧的过程就是对圆盘耙片进行感应加热，并通过合适的生产设备进行轧制。这一过程可保证纤维的密实度，刃口的最大强度和耐磨性。这一点是与普通刃口压型工艺最基本的区别。

All disks are hot-rolled. Hot rolling is a process by which the disk is heated by induction and rolled with the proper equipment. This process allows compactness of the fibers, giving the most cutting edge strength and wear resistance and this is the substantial difference from cutting edge profiling

圆盘耙片的强度、韧性和平面性测试: TEST OF STRENGTH, FLEXIBILITY, AND PLANARITY OF DISCS :

15T

所有测试完成后，圆盘耙片仍然可以与垂直平面完美贴合。
After these tests, the disc is placed on a vertical flat surface to show its perfect planarity.
